Project Experience

<u>Product Website.</u>

Handled Whole product-based website developed using WordPress. This website includes more than 100 pages with Customized forms, DEMO Booking, Blogs, Help center and Online chat. These all triggers are tracing in Google Analytics.

Demo Booking:

Users can book a demo from all over the world, it will be assigned to the responding person's calendar based on their regions using 3rd Party Online appointment scheduling software, and the data will be stored in a CRM.

Blogs / Help Center:

Blogs and Help Center are customized from the WordPress default blog functionality. I have faced a lot of troubles and learned a lot from this functionality section.

Question and Answer:

These questions and answers are loaded from their CRM. All questions will be uploaded with answers in their CRM. These are loaded in this website using API calls.

Users also can submit their questions, these data will be stored in CRM and notification will be sent to the user and admin. Once the answer is released, that notification will be sent to the user with the URL.

Online chat:

From this chat customer can interact with humans and also customers can book for their Demo's. This Demo also will work the same as Demo Booking.

I have handled their WordPress plugins also. Using this, users can store their data in a CRM.

<u>MALAYSIA PROJECTS DETAILS</u>

I have worked in Malaysia for 3 Years. There I have Experienced a lot of WordPress (CMS) and E-commerce projects.

<u>PHP, MYSQL, HTML, CSS:</u>

http://compass-ion.asia/
