Reasons: windows 10 OS remove the local administrator group because the local policy is not allow the keep the domain user account because of the mismatch of the Group Policy.

Solution: first step I do unjoin the Domain for local pc and restart the pc after restart pc again join the domain then log in with the administrator Right Account (IT operation) and add the local administrator group with Power shall command.

```
C:>net localgroup administrators daffahco\600 /ADD
C:>net localgroup administrators daffhaco\400 /ADD
Domain user account can add from computer management
```

After Run the domain user account is added to the local administrator Group and issue is resolves.
